ABSTRACT

"Personalized GUI" is a utility Graphical User Interface (GUI) which helps the user to schedule their work in a smart way. The smart way includes organized work schedule and time management. This GUI includes 3 modules: Alarm Clock, Clipboard, Calculator and a Currency Convertor.

Alarm Clock facilitates the user to work in a scheduled way as per the routine fixed and also acts as a reminder for proper time utilization. Clipboard helps to jot down any necessary points, links and website. Calculator performs mathematical operations as usual and like all other utilities present in the GUI, comes into handy when required for use. The Currency Convertor converts the value of one currency into another foreign currency chosen. The convertor has been linked to the website which regularly updates the value ass the currency values change over time.

The above mentioned features have been merged together into one GUI, defined or termed as personalized GUI. Due to personal customization, the personal GUI is defined as user friendly.
