SIDDAGANGA INSTITUTE OF TECHNOLOGY

Affiliated to Visveswaraya Technology University, Belagaum

For the academic year 2016-17

Project Synopsis

Project Title: Desktop Alarm (Organizer)

Guide Name: JAGADAMBA G.

Outline of the Project:

We will be designing a system application where we address the problem of organizing schedule in a single platform. We are completely dependent on technology for every small task we refer to internet without any second though. We will be creating a **GUI** with multiple tabs; each tab will have certain tasks to do. A user while surfing internet may spend time more time than usual. An **alarm clock** set will tell that the time has exceeded. While working in internet, a user may need to do some mathematical calculations. A tab with **calculator** will do the calculation. A user may find something interesting or useful while working online, and can be copied into the **clipboard** for latter reference. There will be another tab for converting units i.e. **unit convertor**. We are too busy doing our job; hardly have we got any time to read something in extra than usual. A tab for **quotation** will display a thought to enlighten the day of the user or something important from history will be displayed to enhance the knowledge of the user.

Requirement to develop project:

i)   A System

ii)   Qt software

iii)   Netbeans
